

**Syscomm**  
Strategic Network Solutions

## Helping our customers stay secure, resilient, and compliant.

Empowering organisations with smart,  
practical solutions for governance, risk,  
and compliance challenges.

# Stronger Governance. Smarter Risk. Seamless Compliance.

In today's complex and fast-moving environment, organisations face growing pressure to meet regulatory requirements, manage cyber threats, and build operational resilience. Governance, Risk and Compliance (GRC) is no longer a back-office function. It's a strategic enabler of trust, performance, and business continuity.

At Syscomm, we bring clarity and control to your GRC journey. Our services are designed to support you in building robust frameworks, strengthening security, and ensuring compliance—without overburdening your people or processes. Whether you're a growing business seeking structure, or a mature organisation needing refinement, our flexible, scalable approach meets you where you are.

# Our Cybersecurity Framework

Our expert consultants work closely with you to understand your objectives and challenges, then deliver practical solutions that align with your goals. From high-level governance to frontline training, we combine technical know-how with realworld insight—helping you anticipate risks, meet obligations, and confidently move forward.

Syscomm's GRC services are about more than box-ticking – they're about empowering your organisation to operate securely, transparently, and with greater resilience in the face of uncertainty.

## Key Customer Benefits include

- Clear governance and accountability structures
- Stronger risk visibility and control
- Aligned and resilient cyber posture
- Simplified regulatory compliance processes
- Automated, efficient GRC workflows
- Improved stakeholder trust and transparency
- Engaged and informed workforce

**These benefits help turn GRC into a strategic asset, enhancing oversight, reducing risk, and building confidence across your organisation.**

## GRC Advisory

We provide expert strategic guidance across governance, risk and compliance without the overhead of hiring full-time roles. Our flexible advisory-led model supports clients in aligning their GRC programmes to evolving risks, regulations and business priorities. Whether you need support with board reporting, audits, policy design or cross-service integration, we act as your trusted partner, simplifying complexity and driving maturity. Ideal for organisations lacking internal GRC leadership or seeking independent assurance.

## Risk Management

Our structured hands-on approach transforms risk management from a tick-box task into a strategic decision-making tool. We help clients map their systems and assets, assess threats, assign ownership and implement treatment plans, all backed by clear reporting and governance alignment. Whether you're building your first register or improving an existing one, our service ensures risks are visible, prioritised and addressed, driving operational resilience and informed investment decisions.

## Compliance Management

From Cyber Essentials to ISO 27001 and GDPR, we help you meet your compliance obligations with structure, clarity and confidence. Our service includes tailored gap assessments, roadmap creation, policy development, evidence preparation and ongoing advisory. We embed compliance into day-to-day operations so you're not just audit-ready, but truly aligned with regulatory expectations. The result is lower risk, improved trust and scalable compliance maturity.

## Policy and Process Management

We help organisations establish and maintain policy frameworks that are current, clear and operationally relevant. Whether writing from scratch or refining legacy documents, we create structured role-based content that aligns to your governance goals and compliance frameworks. Our service includes drafting, version control, stakeholder engagement and rollout support, making policies not just visible but meaningful, auditable and adopted across your teams.

## Incident Response Planning

A tested documented response plan is essential to containing cyber incidents before they spiral. We develop tailored incident response plans with clear escalation paths, role assignments and playbooks for common threat scenarios like ransomware, phishing and insider misuse. Our tabletop testing ensures your plan works in real life, not just on paper. We help you respond with speed, clarity and confidence while meeting your legal, regulatory and stakeholder obligations.

## Business Continuity Planning

Disruption is inevitable but preparedness is a choice. Our business continuity planning service ensures your organisation can maintain operations through cyberattacks, IT failures or external incidents. We support everything from foundational asset discovery to full plan development, testing and improvement. With tailored plans, scenario-based testing and governance alignment, we help you recover faster, meet compliance standards and build long-term operational resilience.

## Virtual Data Protection Officer

Our virtual data protection officer service provides expert-led data protection support without the overhead of hiring in-house. Acting as your designated privacy lead, we support GDPR compliance, manage SARs, review DPIAs, update policies and brief leadership. With a flexible embedded model, we ensure accountability, reduce breach risk and foster a privacy-aware culture, ideal for education, public sector and SME environments.

## Security Training and Awareness

People are often the weakest link in security. We help make them your first line of defence. Our fully managed awareness programmes include live training, e-learning, policy walkthroughs, phishing simulations and behavioural nudges tailored to your culture, risks and audience. From senior leadership briefings to onboarding sessions, we equip staff to understand threats, apply policies and act confidently, reducing risk and boosting resilience.

## Third-Party Risk Management

Vendors, cloud platforms and service providers extend your digital footprint and your risk. Our third party risk management service helps you identify, assess and monitor suppliers across the full lifecycle. From onboarding assessments to contract reviews and risk profiling, we bring structure and visibility to your external relationships, ensuring third party risk is managed with the same rigour as internal controls.

## Validation Services

Controls are only effective if they work in the real world. Our validation services combine vulnerability scanning and penetration testing to identify weaknesses, test defences and validate your security posture. We deliver clear risk-scored reports with actionable guidance, helping you meet assurance requirements, prepare for audits and continuously strengthen your cyber resilience. Offered as one-off tests or recurring programmes.
